Project Name: Burger & Coffee Point
Management System.

Project Objective: This project is created for restaurant. It will help a restaurant manager to maintain his works. Using this, anyone can count how many food is sold. Users can also change food name and food price. Features of this application,

- Count food cost separately.
- Count tax amount.
- Reset option that will set all text fields remain as new.
- Create a bill for user.

Project Motivation: Recently, I visited some restaurant and they face many troubles as they have no digital

system. So, I created this project, to help them.

Project Expected Outcome: When user input product amount, price, tax amount and this application will create a bill copy for customer.

Project Features:

- Change Product Name.
- Change Product Price.
- Change Tax & Amount.
- Count Cost Separately.
- Convert USD to BDT.
- Create a pdf bill copy.
- Reset Option.
